COMBINING INNOVATION & EXPERTISE TO **REDUCE DOWNTIME**

SCENARIO

Multinational biotechnology company was focused on improving safety and reducing cost in their contamination control program at a Northern European site.

INNOVATION

Ecolab's industry expert Global Technical Consulting team provided a site survey and contamination control strategy assessment.

Based on the survey findings, Klercide Low Residue Quat was recommended and implemented. This led to a reduction in rinses, saving both water and labor.

The Global Technical Consulting team supported the change with Validation data and project management, on-site training, and documentation at no additional charge to the site
